❖ HTML

- HTML stands for HyperText Markup language.
- Hyper Text means text that contains links. It allows you to jump from one page to another page by clicking a link. These links are called hyperlinks.
E.g. → `<a href="https://google.com">Go to Google</a>`
- A Markup Language is a language that uses tags to structure and format content.
E.g. `<h1>` → Heading, `<p>` → Paragraph, `<img>` → Image, `<a>` → Link

Q. What is HTML ?

HTML is the markup language used to create web page, is called HTML.

- This is the most basic building block of every website, Without using HTML we cannot build website.
- File extension of html file is .html or .htm
- HTML Skleton of any webpage/ Website.
- HTML is not a case sensitive.
- Example:

`<html>`

Or

`<HTML>`

Or

`<Html>` all these are same effect.

HTML

HTML + CSS

HTML+CSS+JavaScript

HTML

HTML + CSS

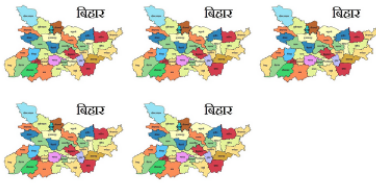

History Of HTML

- First version of HTML is HTML in 1991 by **Tim Berners-Lee**.
- Father / Developer of HTML → Tim Berners-Lee.
- Now the current standard used today (2026) is HTML5 version from 2014. (Living Standard).

Input Device

Lorem ipsum dolor sit amet consectetur adipisicing elit. Dolore quis tempore fugiat fugit quasi numquam asperiores recusandae a consequatur, quidem delectus vel excepturi qui, error doloremque quibusdam harum quam id

Activate Windows

Go to Settings to activate Windows.

❖ What are required software to create and run the html code.

- 1)Text Editor e.g. notepad, notepad++ etc.
- 2)Web browser e.g firefox, chrome IE etc...

Text Editor

Web Browser

Safari

Apple

Firefox

Mozilla

Chrome

Google

Edge new

Microsoft

Opera

Opera Software

❖ **How to run a html code:**

- ✓ Step1: Create a html file (extension of file should be .html or .htm)
- ✓ Step2: Right click on the html file and select open with notepad or any text editor.
- ✓ Step3: Write HTML code in the file and save it.
- ✓ Step4: To run html code right click on the html file and open with any web browser. Now you will see the output in the browser.

❖ **Document Strcutre of HTML :-**

In HTML, **document structure** refers to the organized layout of a web page, which defines how the content is arranged and displayed in the browser.

```
<!DOCTYPE html>
<html>
  <head>
    <title>    </title>
  </head>
  <body>
    </body>
</html>
```

HTML Tag

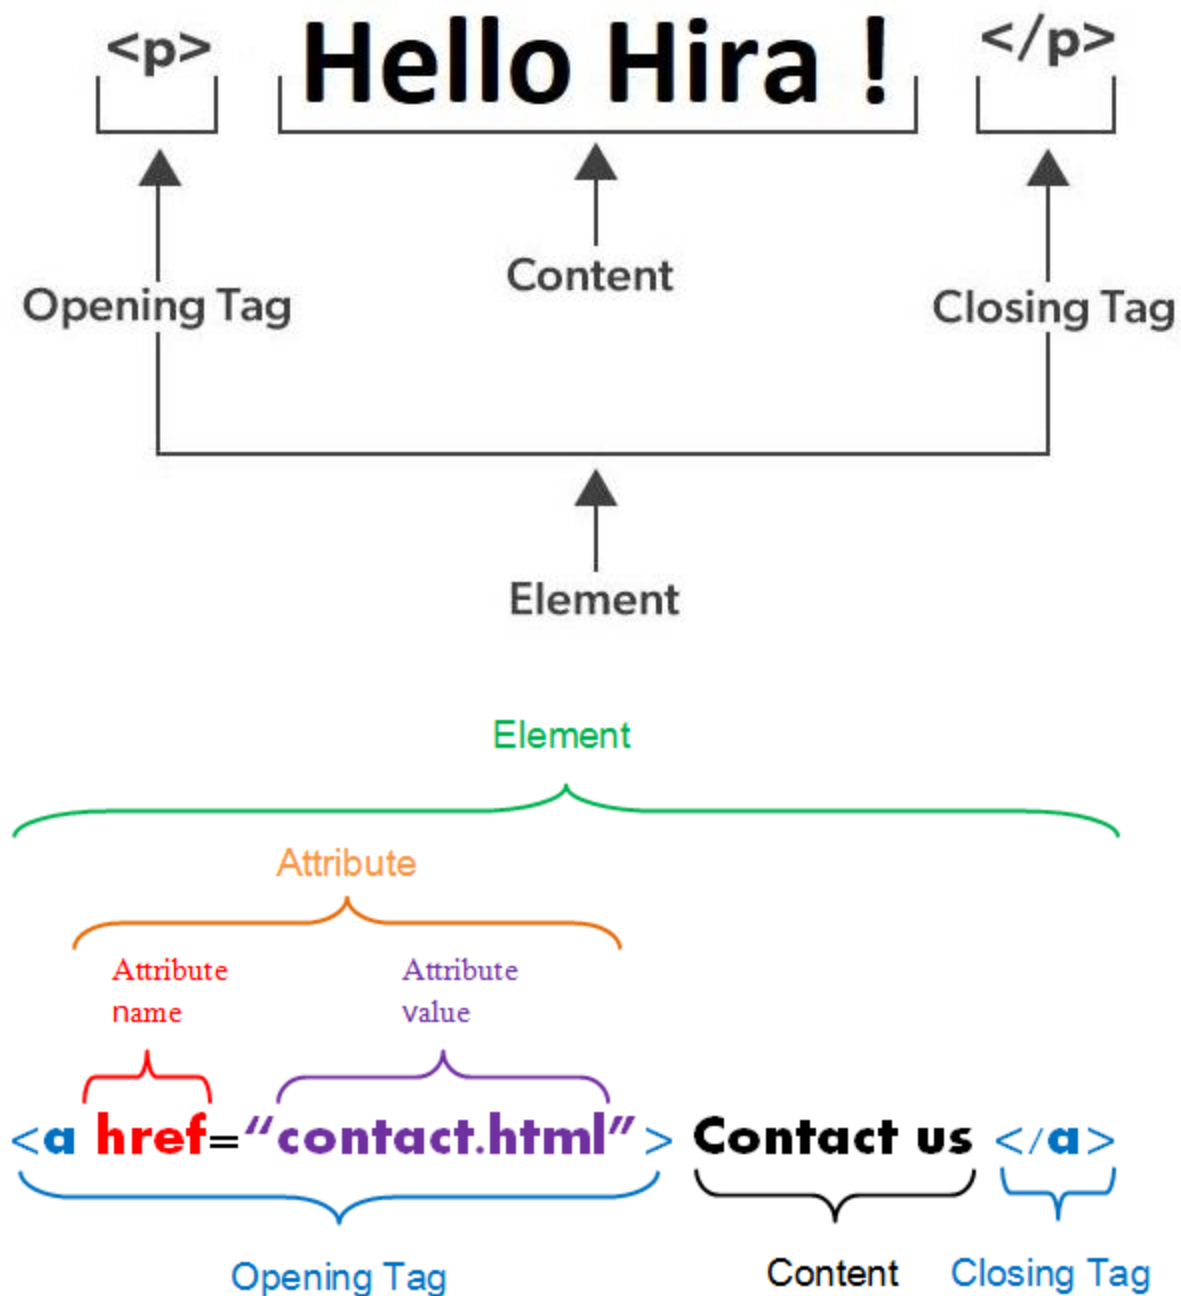

- A tag is a piece of code that marks the start or end of an element.
Written inside angle brackets < >.

Types of tags → Two types of HTML tag

- a. Openin tag → starts an element e.g. → <p>
- b. Closing tag → ends an element e.g. → </p>
 - Some tags are self-closing like → ,
,....

HTML Element

- An element is the complete structure of webpage.
- It contain start tag/Open tag, content, and an end tag/close.
- E.g. → <p> Hello World </p>
Here, <p> → opening tag
 Hello word → content
 </p> closing tage
Entire thing **<p> hello word </p>** is the element.

❖ What is attribute ?

- Attribute is property that gives extra information about an HTML element and is written inside the opening tag.

OR

- Provide additional information about elements.

Example - ``

Key Points to Remember

1. Self-closing tags

Elements like `<img>`, `<br>`, `<hr>` don't need closing tags.

2. Comments

Use `<!--comment write -->` for notes
