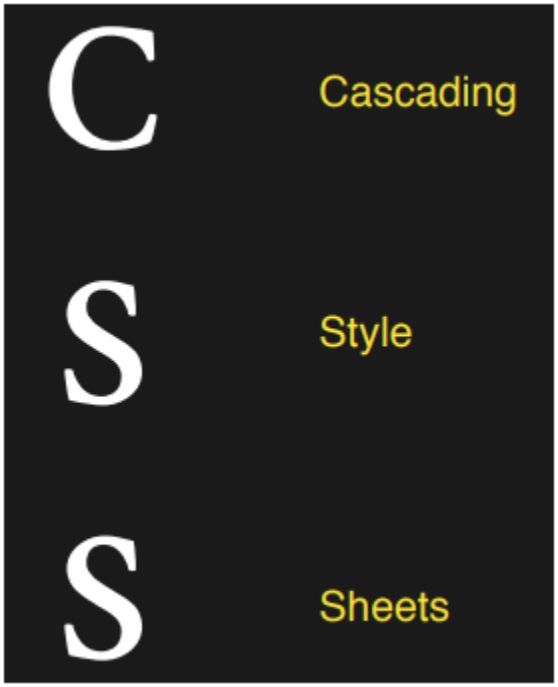
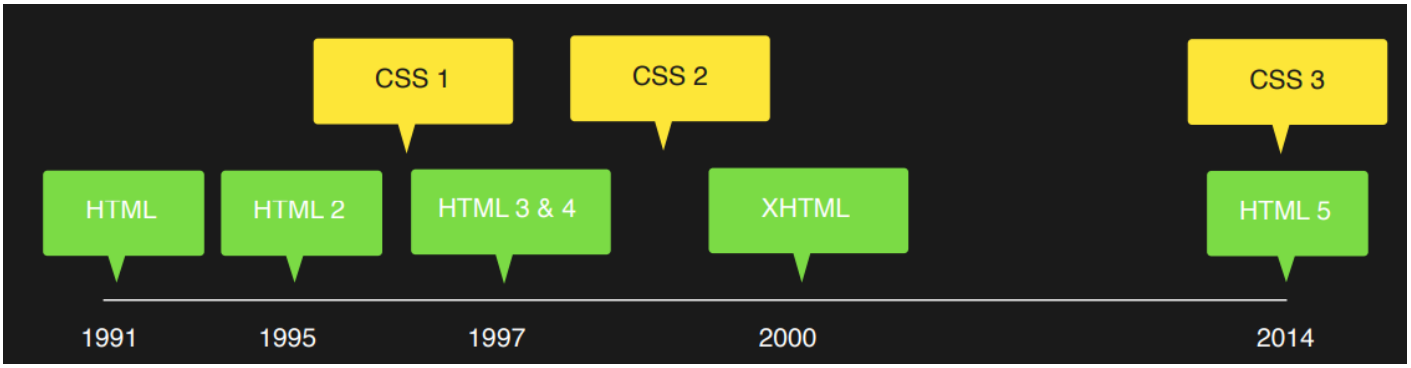
Part -1 (Paper-1) **– Hira Kumar**

Web Development





HIRA KUMAR

❖ Position Property

- Position property (CSS) is used to control the placement of an element on a webpage.
  (CSS में position property का उपयोग किसी element को screen पर कहाँ और कैसे दिखाना है यह तय करने के लिए किया जाता है।)
- Syntax – {
  Position:value;
  }

➢ Values of position / Types of Position

Value	Work
static (default)	Default position of every element No special positioning applied
relative	Element moves relative to its original position Space of original position is still reserved
absolute	Positioned relative to the nearest positioned parent Removed from normal document flow
fixed	Positioned relative to the browser window (viewport) Does not move when scrolling
sticky	Works like relative until a scroll point Then behaves like fixed

Example –

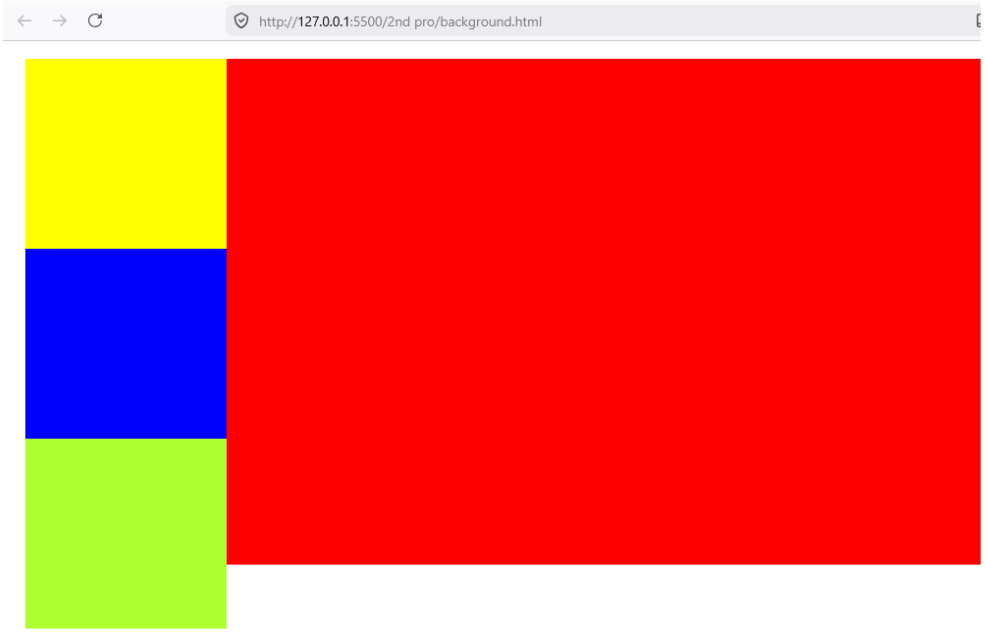
Position:Static; → Element अपनी normal जगह पर रहता है |
Top,left,right,bottom not work.
Block element vertically stack होते है

```html
    <style>
        #id1{
            width:80vw;
            height:80vh;
            margin:20px;
            background-color: red;
        }
        .c1{
            width:15vw;
            height:30vh;
            background-color: yellow;
            position:static;

        }
         .c2{
            width:15vw;
            height:30vh;
            background-color: blue;
            position:static;

        }
        .c3{
            width:15vw;
            height:30vh;
            background-color: greenyellow;
            position:static;

        }
    </style>
</head>
<body>
    <div id="id1">
        <div class="c1"></div>
        <div class="c2"></div>
        <div class="c3"></div>
    </div>
```

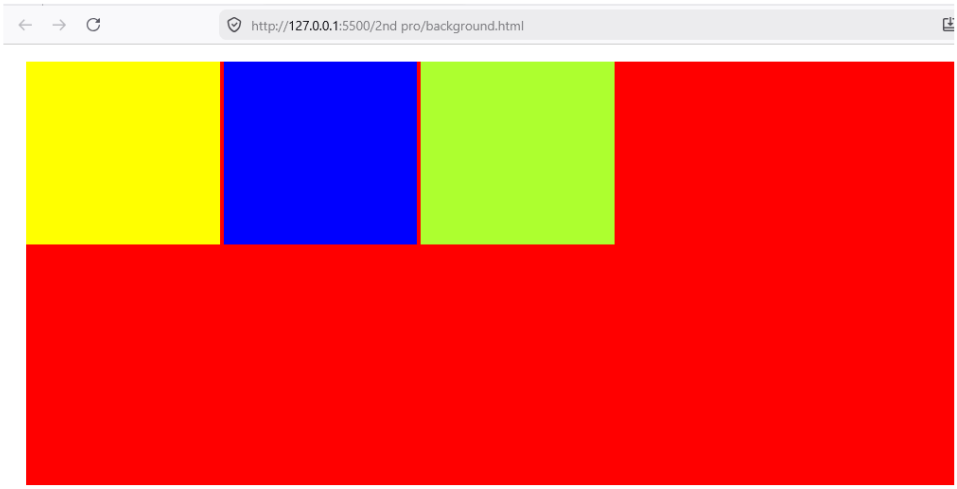


OR

```html
    <style>
        #id1{
            width:80vw;
            height:80vh;
            margin:20px;
            background-color: red;
        }
        .c1{
            width:15vw;
            height:30vh;
            background-color: yellow;
            position:static;
            display:inline-block;

        }
         .c2{
            width:15vw;
            height:30vh;
            background-color: blue;
            position:static;
            display:inline-block;
        }
        .c3{
            width:15vw;
            height:30vh;
            background-color: greenyellow;
            position:static;
            display:inline-block;

        }
    </style>
</head>
<body>
    <div id="id1">
        <span class="c1"></span>
        <a class="c2"></a>
        <div class="c3"></div>
    </div>
```



Relative

Moves relative to its original position

अपनी original जगह से move करता है

Offset values / offset property

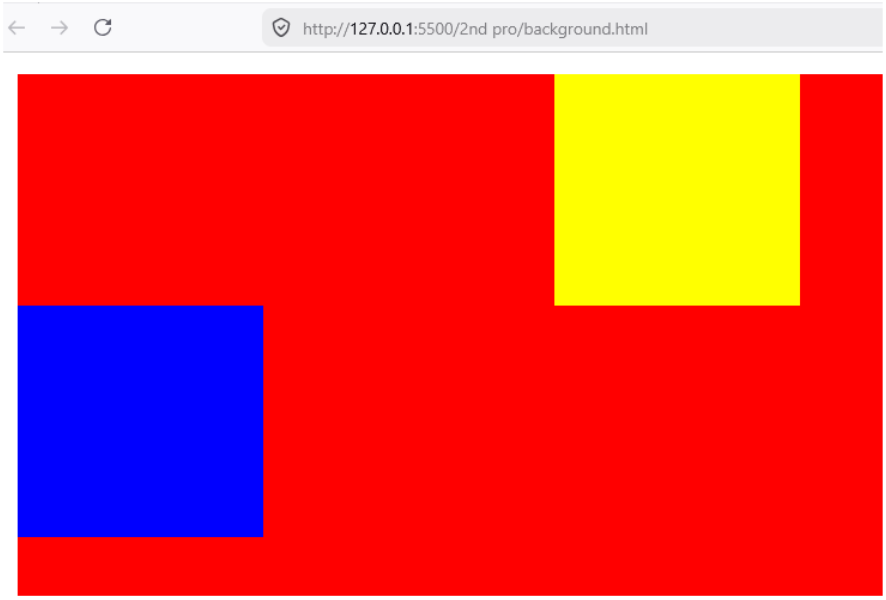
top,left,right,bottom को हम offset बोलते हैं |

Top,left,right,bottom जरुर लिखें, नहीं लिखने पर normal flow होगा मतलब box एक के नीचे एक दिखेगा |

Note :- यदि अपनेposition:relative दिया लेकिन offset नहीं दिया तो वह position:static की ही तरह दिखेगा |

Example:-

```
    <style>
        #id1{
            width:80vw;
            height:80vh;
            margin:20px;
            background-color: red;
        }
        .c1{
            width:15vw;
            height:30vh;
            background-color: yellow;
            position:relative;
            left:500px;
        }
         .c2{
            width:15vw;
            height:30vh;
            background-color: blue;
            position:relative;
        }
    </style>
</head>
<body>
    <div id="id1">
        <div class="c1"></div>
        <div class="c2"></div>
    </div>
</body>
```



(यहाँ ऊपर figure में yellow box में offset (left:500px) का उपयोग करने पर उसका position change हो गया, जबकि blue box में कोई offset नहीं दिया गया इसलिए वह static की तरह अपनी original position पर ही रहा। position: relative होने के कारण दोनों boxes अपनी original जगह reserve रखते हैं, और blue box नीचे इसलिए दिखाई दे रहा है क्योंकि div elements normal document flow (block elements) को follow करते हैं।)

Absolute

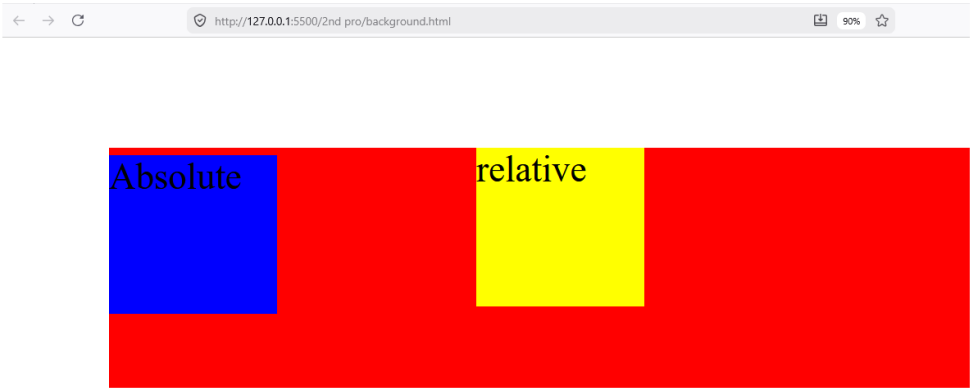
Positioned relative to nearest positioned parent

अपने parent (jiska position set ho) ke हिसाब से move करता है

यदि कोई parent ना हो या parent होते हुए भी उन्हें नहीं बताया गया हो तो <body> को अपना parent मानता हैं |

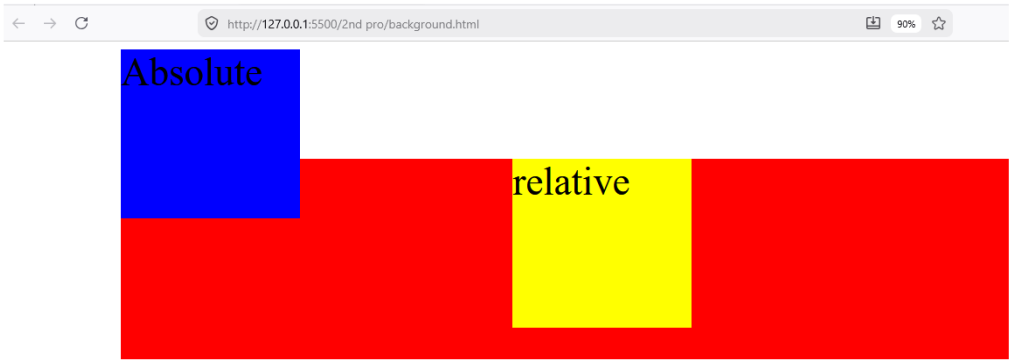
With Parent

```html
<style>
    #id1{
        width:80vw;
        height:80vh;
        margin:150px;
        background-color: red;
        position: relative; /* div ko batane par */
    }
    .c1{
        width:15vw;
        height:30vh;
        background-color: yellow;
        position:relative;
        left:500px;
        font-size:50px;
    }
     .c2{
        width:15vw;
        height:30vh;
        background-color: blue;
        position:absolute;
         font-size:50px;
          top:10px;
    }
</style>
</head>
<body>
    <div id="id1">
        <div class="c1"> relative</div>
        <div class="c2"> Absolute</div>
    </div>
```



Without parent

```html
<style>
    #id1{
        width:80vw;
        height:80vh;
        margin:150px;
        background-color: red;
    }
    .c1{
        width:15vw;
        height:30vh;
        background-color: yellow;
        position:relative;
        left:500px;
        font-size:50px;
    }
     .c2{
        width:15vw;
        height:30vh;
        background-color: blue;
        position:absolute;
         font-size:50px;
          top:10px;
    }
</style>
</head>
<body>
    <div id="id1">
        <div class="c1"> relative</div>
        <div class="c2"> Absolute</div>
    </div>
```



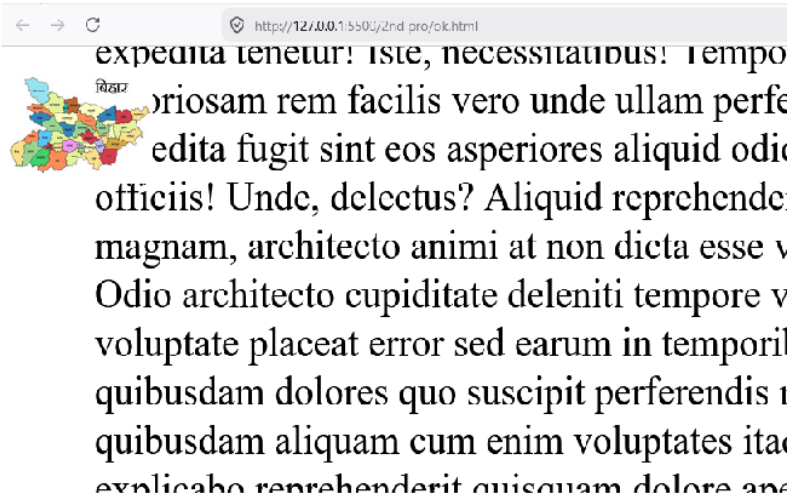
fixed

Fixed on screen (does not move on scroll)

Scroll karne par bhi same jagah par fix रहता है

```html
.fixbox{
    position:fixed;

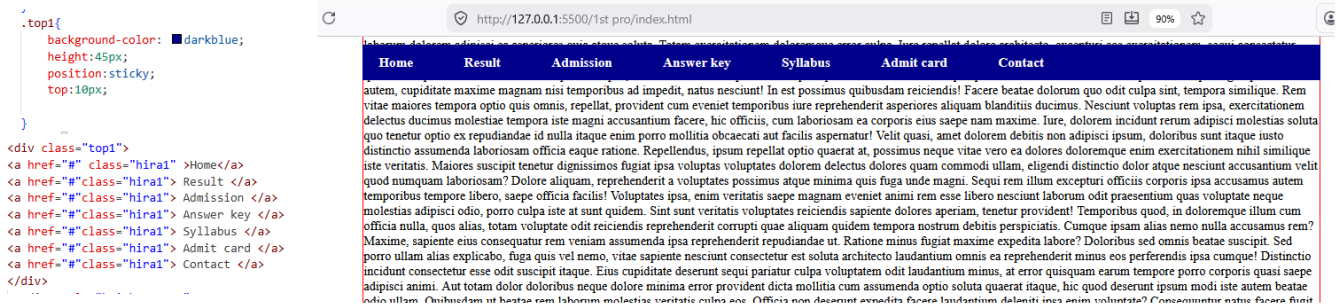
}
</style>
</head>
<body>
    <div class="fixbox">
        <img src="bihar.jpg" width="150px"; >
        </div>
    <h2> Computer</h2>
    <p>Lorem, ipsum dolor sit amet consectetur adipisi
    molestias exercitationem quibusdam a iure natus d
    soluta nihil itaque numquam! Reiciendis id necessi
    nobis ab minus repudiandae eaque est dignissimos e
    incidunt eum maiores repellat dolorum, dolore quas
    necessitatibus! Temporibus, velit tempore explicab
    perferendis neque suscipit facere expedita fugit s
```



sticky

Scroll ke saath move karta hai, fir fix ho jata hai

Pehle normal rehta hai, scroll ke baad fix ho jata hai



Login funny button using only HTML + CSS

```
<!DOCTYPE html>
<html lang="en">
<head>
   <meta charset="UTF-8">
   <meta name="viewport" content="width=device-width,
initial-scale=1.0">
   <title>Document</title>
   <style>
      #id1{
         border:2px solid black;
         width:80vw;
         height:80vh;
         margin:30px;
         display:relative;
      }
      .class1{
```

```
    margin-left:150px;
    font-size:30px;
    line-height: 1px;
}
input[type="text"]
{
    border-radius: 70px;
    padding:20px;
    font-size:30px;
    margin-left:280px;
}
input[type="password"]
{
    border-radius: 70px;
    padding:20px;
    font-size:30px;
    margin-left:280px;
}
