Bachelor Of Computer Application (BCA)

Part -1 (Paper-1)

– Hira Kumar

Web Development

❖ Web / WWW

- The term “Web” Stands for the “World Wide Web(WWW)”.
- The Web is a vast information system on the internet where documents (web page) and other resources are interconnected by hyperlinks and URL’s and can be accessed through a web browser. (web, internet पर मौजूद जानकारी का एक विशाल जाल है, जिसमें सभी वेबसाइट और web page आपस में जुड़े होते हैं |)
(सीधी शब्दों में - internet एक सड़क की तरह हैं और web (WWW) उस सड़क पर चलने वाली कार है, जिसमें आप बैठकर दुनिया की किसी भी जानकारी(website) तक पहुँच सकते हैं)

❖ Web page

- A web page is a single document available on the world wide web(WWW) that can be viewed using a web browser.
- Web pages are written using HTML and are stored on web servers.

What contain in web page ?

- In web page can contain text, image,video,link, etc...
- E.g. → Home page of google, Login page of facebook, contact page, about page,.....

Google Search

❖ What is website ?

- A Website is a collection of related web pages stored on a web server and accessed through the internet using a single domain name.

OR

- Collection of Web page is called Website.

- Example :- Wikipedia.org, ndtv.in, bbc.com, indianrailways.gov.in, imdb.com, pmkisan.gov.in, <https://hira24y7.github.io/bcanotes/> , amazon.com, facebook.com, Zomato,....

❖ **Types of Website**

Two types

(i) **Static Website**

(ii) **Dynamic Website**

(i) Static Website

- A static websites is a website whose content remains the same for every user.
- IT is created using HTML and CSS and does not change automatically.
- Example – Personal portfolio, news website, Wikipedia,..

(ii) Dynamic website

- A dyamic website is a website whose content can change according to the user or data.
- It uses server-side language like PHP,Python, JS and a database.
- Example – online form filling, E-commerce website,social media websites.

❖ **Web server**

- A web server is a system that stores website files and delivers web pages to users over the internet when requested by a browser.
- Example → Apache server, nginx server, Microsoft IIS, Google web server,.....

❖ What is Web Developer ?

- A Web developer is a professional who specializes in building and maintaining websites and web applications.
- They are the architects and builders behind the sites we use every day.

(web डेवलपर वह व्यक्ति हैं जो वेबसाइटों और web application को बनाने और maintain रखने का काम करता हैं | वे internet पर मौजूद उन सभी साइटों की रीढ़ होती हैं जिन्हें हम रोजाना इस्तेमाल करते हैं | उनका काम सिर्फ एक खूबसूरत दिखने वाली वेबसाइट बनाना ही नहीं, बल्कि यह देखना होता हैं की वह तेजी से लोड हो एवं सही तरीके से काम करें और उपयोग एवं user friendly हो |)

- ✓ **One line answer** → They build and maintain websites.
- Work :- Create Website, Web application, design + coding + maintain database,...
- E.g. → You (आप भी एक web developer हो सकते हैं)

❖ Web application are typically categorized into two main types :

1. Front - End / Client - side
2. Back - End / Server - side

1. Front – End

- This is the part of the application that run in your browser.
- It's what the user sees and interacts with. It's the user interface (UI).

2. Back – End

- This is the part of the application that runs on a server.
- It's the “brain” that processes data, handles logins, talks to the database, and sends information back to the front-end to be displayed.

Part of Front-End

❖ HTML

- HTML = Hyper Text Markup Language
- HTML is a markup language that tells the browser (chrome, firefox, safari, opera,.....) how to display content on a webpage(website). (HTML एक मार्कअप भाषा है जो ब्राउज़र (क्रोम, फ़ायरफ़ॉक्स, सफारी, ओपेरा,... ..) को बताती है कि वेबपेज (वेबसाइट) पर content कैसे प्रदर्शित की जाए।)
- It is the standard language used to create web pages.
- HTML uses tags to structure content such as headings, paragraphs, images, links, tables, etc.....
- Example : <h1>, <p>, , <a>

❖ CSS

- CSS = Cascading Style Sheets
- It is used to style and design web pages.
- CSS is a style sheet language used to control the appearance of HTML elements on a webpage.(CSS एक style sheet भाषा हैं जो HTML के elements के दिखने के तरीके (design) को नियंत्रित करती हैं)

- With CSS you can change:- Colors, Fonts, Layout, Spacing, Background, Animation

❖ Javascript (JS)

- Javascript is a scripting language used to add behavior and interactivity to web pages. (java script एक scripting भाषा है जो webpage में behavior और interactivity जोड़ता है |)
- With javascript you can:- Show alerts and messages, Validate forms, Create animations, Update content without reloading page, Handle events (click, hover, key press).
