Box-Shadow

- The box-shadow property in CSS is used to add shadow effects around an element's box(like div, button, image, etc.). It helps make your UI look more modern and attractive.
- **Syntax**

  Box-shadow: h-offset v-offset blur spread color;

➢ **h-offset (Horizontal shadow)**

Moves shadow left/right

Positive → right , Negative → left

➢ **V-offset (Vertical Shadow)**

Moves shadow up/down

Positive → down , Negative → up

➢ **Blur-radius (optional)**

Controls blur level

0= sharp shadow

Higher value = more blur

➢ **Spread-radius (optional)**

Expands or shrinks shadow

Positive → bigger shadow

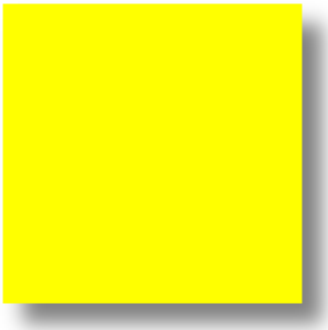
Negative → smaller

➢ **Color**

Shadow color name (red,black,….)

Example

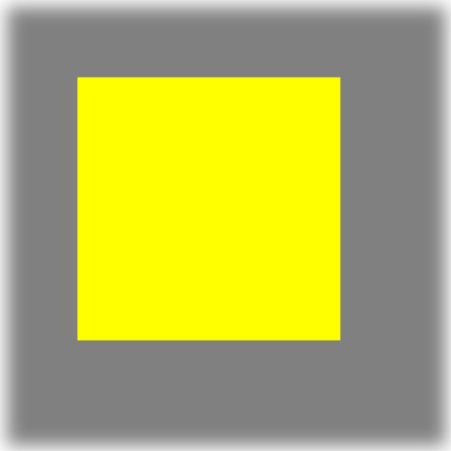
```
Div{
    Box-shadow: 5px 5px 10px black;
}
```



```
    <style>
        div{
            width:150px;
            height:150px;
            background-color: yellow;
           margin:150px;
           box-shadow:10px 10px 10px  gray;
        }
    </style>
</head>
<body>
    <div></div>
</body>
```

With spread

```
Div{
    Box-shadow:5px 5p 10px 2px gray;
}
```

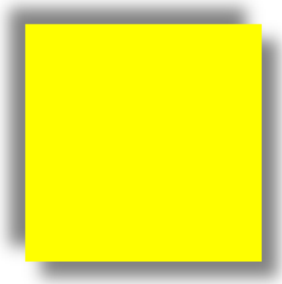


```
    <style>
        div{
            width:150px;
            height:150px;
            background-color: yellow;
           margin:150px;
           box-shadow:10px 10px 10px 50px  gray;
        }
    </style>
</head>
<body>
    <div></div>
</body>
```

Multiple shadows

```
Div{
    Box-shadow: 2px 2px 5px red, -2px -2px 5px blue;
```

}



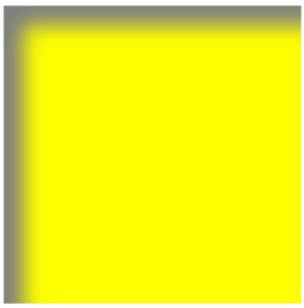
```
    <style>
        div{
            width:150px;
            height:150px;
            background-color: yellow;
           margin:150px;
           box-shadow:10px 10px 10px gray, -10px -10px 10px gray;
        }
    </style>
</head>
<body>
    <div></div>
</body>
```

Inside Shadow

Div{

Box-shadow: inset 5px 5px 10px gray;

}



```
    <style>
        div{
            width:150px;
            height:150px;
            background-color: yellow;
           margin:150px;
           box-shadow: inset 10px 10px 10px gray;
        }
    </style>
</head>
<body>
    <div></div>
</body>
```

Buttom shadow

Button{

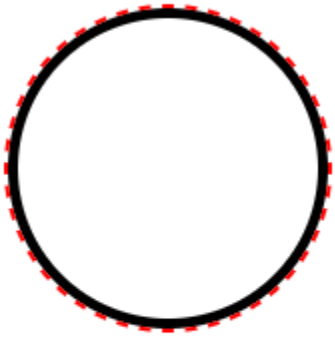
Box-shadow:0px 4px 8px rgba(0,0,0,0.3);

}

❖ Outline Property

- The outline property in CSS is used to draw a line outside an element's border. It looks similar to a border, but it behaves differently.
- An outline is a line drawn around an element, outside its border, and it does not take up space in the layout.
- Syntax –

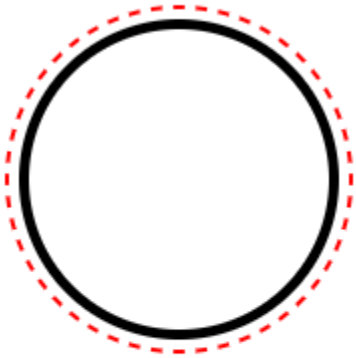
```
{
outline: width style color;
}
```



```
    <style>
        div{width:150px;
        height:150px;
        border:5px solid black;
        border-radius:50%;
        margin:250px;
        outline:2px dashed red;
        }
    </style>
</head>
<body>
    <div></div>
</body>
```

➢ Outline-offset

space between border and outline



```
    <style>
        div{width:150px;
        height:150px;
        border:5px solid black;
        border-radius:50%;
        margin:250px;
        outline:2px dashed red;
        outline-offset:5px;
        }
    </style>
</head>
<body>
    <div></div>
</body>
```
