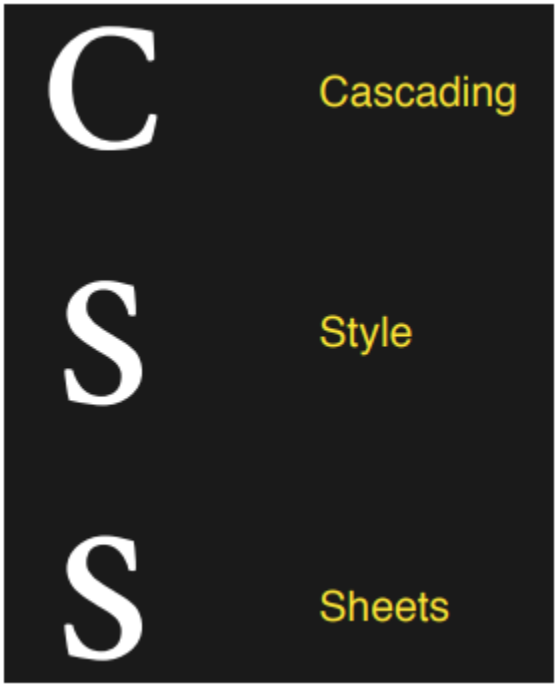
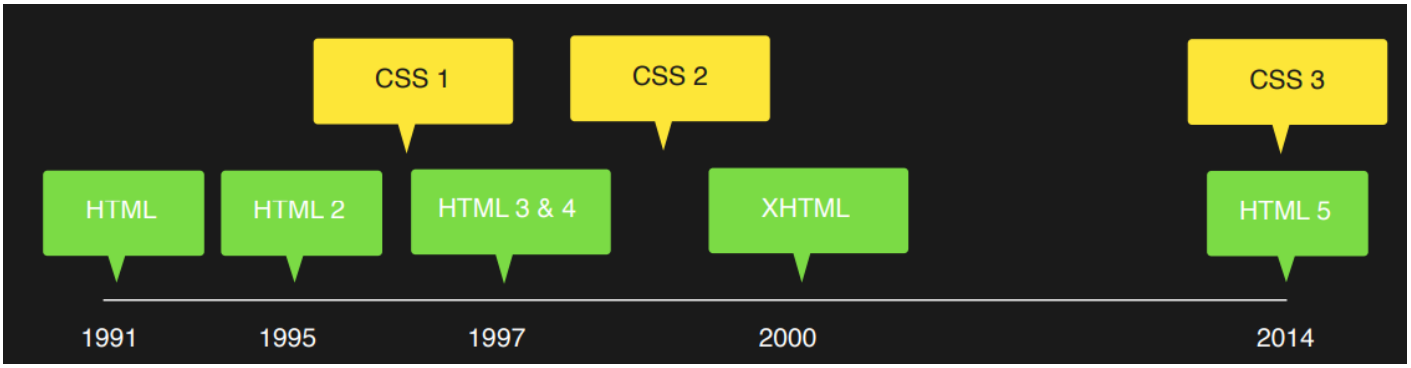
Bachelor Of Computer Application (BCA)

Part -1 (Paper-1) **– Hira Kumar**

Web Development





HIRA KUMAR

❖ Overflow Property

- The overflow property controls what happens when content goes outside the container (box).

OR

- The overflow property controls what happens when content is too big to fit inside its container (when width or height is limited).
- Syntax –

```
{
    Overflow:scroll;
}
```

All values of Overflow

Values	Work
Visible (default)	Content spills out of the container, even overlapping other elements
Hidden	Content that doesn't fit is cutoff/invisible (जो box में text आया वो दिखा बाकि sub hide हो जायेगा)
Scroll	Always shows scrollbars (even if content fits). So you can scroll to see hidden content.
Auto	Scrollbars appear only when needed.
Clip	Like hidden, but also disables scrolling

Example –

```
<style>
    div{
        width:400px;
        height:250px;
        border:2px solid ■black;
        margin:50px;
        padding:10px;
        text-align:justify;
        overflow:auto;
    }
    h1{
        text-align:center;
    }
</style>
/head>
body>

```
div{
    margin:20px;
    overflow-x:scroll;
    overflow-y:scroll;
    width:500px;
    height:500px;
}

    <div>
<img src="bihar.jpg">
    </div>
```

❖ Hover Effects

- Hover is a type of selector. The hover is a pseudo-class in CSS that applies styles to an element when the user places

their mouse cursor over it. It's one of the most common ways to add interactive effects to websites.

- Syntax :-

```
Selector:hover{
        Property:value;
    }
```

- Example :

```
div:hover {
    background-color:green;
}
```

Properties you can change on :hover

- ✓ Color (color, background-color, border-color)
- ✓ Size (width,height,transform:scale());
- ✓ Position (transform)
- ✓ Visibility (opacity,display,visibility)
- ✓ Shadows (box-shadow, text-shadow)
- ✓ Borders, margins, padding

Important points

- ✓ :hover works on all HTML elements, not just links
- ✓ On touchscreens(mobile/tablet), :hover behavior is inconsistent.
- ✓ Always provide a good non-hover state.

Practical1 -

```html
<style>
    button{
        width:150px;
        height:50px;
        font-size:20px;
        background-color: red;
        border-radius:10px;
        margin-left:500px;
        color: white;
        font-weight:bold;
    }
    button:hover{
        background-color: darkred;
        border:5px dashed white;
    }
</style></head>
<body>
    <h1> Subscribe my youtube channel </h1>
    <button onclick="alert('hello!')">Subscribe</button>
```

HIRA KUMAR

```html
<style>
    div{
        width:250px;
        height:200px;
        background-color: blue;
        color: white;
        margin:50px;
        display:inline-block;
        border:3px solid black;
    }
    .hira1:hover{
        background-color: green;
    }
    .hira2:hover{
        background-color: red;
    }
    .hira3:hover{
        background-color: yellow;
    }

</style></head>
<body>
    <h1> Subscribe my youtube channel </h1>
    <button onclick="alert('hello!')">Subscribe</button> <br>
    <div class="hira1">
        <h1> HTML</h1>
